

The Group G Controller has enhanced capabilities for dependable operation in a wide range of applications.

Control and Display Panel

The Group G Controller's easy-to-navigate 128 x 64 graphical LCD display with keypad provides LED indicators for switch position, source acceptability, not-in-auto mode, and alert condition. It also provides test and time delay bypass soft keys.

Features

- Intuitive, easy-to-navigate 128 x 64 graphical LCD display with soft keypad and provides six LED indicators
- Switch Position (green for normal, red for emergency LED)
- Source Acceptability (green for normal, red for emergency LED)
- “Not In Auto” (LED)
- Common Alarm (LED)
- Integrated display is self-contained requires no other components for effective operation
- Allows for open or delayed transition for both automatic and non-automatic configurations
- An integrated, multilingual, user interface for configuration and monitoring for application flexibility
- Multiple source-sensing capabilities for voltage and frequency
- Optional current card provides current sensing without an external metering device
- ASCO's patented Predictive Outage Detection feature senses voltage instability conditions or flickers and proactively starts the generator for protection of equipment and reduction of down-time

ASCO Group G Controller

Standard Selectable Features

- Inphase monitor to transfer motor loads, without any intentional off time, to prevent inrush currents from exceeding normal starting levels
- Engine exerciser to automatically test backup generator each week, with or without load for 20 minutes not adjustable, (advanced multi-schedule exerciser available as part of optional 11BE bundle)
- Commit to transfer
- Selective load disconnect circuit to provide a pre-transfer and/or post-transfer signal when transferring from emergency to normal and/or normal to emergency
- Re-transfer to normal through soft keys on user interface permits selection of “manual” or “automatic” re-transfer
- 60Hz or 50Hz selectable switch. Three-/single- phase selectable switch

Voltage, Frequency, and Current Sensing Features

- 3 phase sensing on the Normal source and single phase sensing on the Emergency Source (3 phase Emergency sensing optional)
- Under and over voltage and frequency settings on normal and emergency
- True RMS voltage sensing with +/-1% accuracy
- Frequency sensing accuracy is +/- 0.1Hz
- Voltage and frequency parameters adjustable in 1% increments
- Selecting settings: single or three phase voltage sensing on normal, and single phase sensing on emergency; 50 or 60Hz. 3-phase voltage unbalance on normal (Emergency unbalance optional)
- Load current sensing card (optional)

Predictive Outage Detection

- Patented feature for continuous sensing of voltage to detect instability conditions or flickers
- Proactive start of the generator to eliminate delay associated with generator startup
- Optional automatic transfer of load after proactive generator start for protection of equipment and reduction of downtime
- Adjustable sensitivity levels for voltage instability, or flicker, detection

Remote Control Features

- External inputs for connecting
 - Remote test switch
 - Remote contact for test or peak shaving applications - if emergency source fails, the switch will automatically transfer back to normal source if acceptable
 - Inhibit transfer to emergency
 - Remote time delay bypass switch emergency to normal

Time Delays

- Engine start time delay – delays engine starting signal to override momentary normal source outages, adjustable from 0 to 6 seconds, (Feature 1C)
- Emergency source stabilization time delay to ignore momentary transients during initial generator set loading, adjustable from 0 to 4 seconds (Feature 1F)
- Re-transfer to normal time delay with two settings (Feature 3A)
 - Power failure mode – 0 to 60 minutes
 - Test mode – 0 to 10 hours
- Unloaded running time delay for engine cooldown, adjustable from 0 to 60 minutes (Feature 2E)
- Pre- and post-signal time delay for selective load disconnect with a programmable bypass on source failures, adjustable from 0 to 5 minutes, (specify ASCO optional Accessory 31BG)
- Delayed transition load disconnect time delay, adjustable from 0 to 5 minutes (3ADTS/3NDTS configuration only)
